   Manuscripts should be written in English, and should be accompanied by a letter of submission stating that they are original unpublished work, not submitted for consideration elsewhere. Authors are asked to supply an English abstract not exceeding 150 words.

2. Manuscripts in English should be typed on one side of the paper only, using double spacing throughout and leaving adequate margins on all sides. All pages should be numbered consecutively, and references, tables and legends for figures should be prepared on separate pages.

3. The first page of manuscripts should contain the following information:
   (a) the title;
   (b) the name(s) and affiliation(s) of the author(s); and
   (c) the address for editorial correspondences.

4. Footnotes should be kept to the minimum and be numbered consecutively. Acknowledgements can be given before the list of references.

5. Where mathematical derivations are abbreviated, the full workings necessary for justifying each step of the argument should accompany all manuscripts of a mathematical nature in order to assist referees. These workings will not be published.

6. In choosing mathematical notation, the following rules should be observed in order to avoid unnecessary delays and reduce printing expenses.

   (1) Avoid unusual symbols when common usage will do without ambiguity, *e.g.*, use $a^*$ instead of $\tilde{a}$;

   (2) Avoid notation which requires setting in small fonts, *e.g.*, use $x_i(t)$ instead of $x_i$;

   (3) Avoid fractions in the $\left( \frac{a}{b} \right)$ form when $(a/b)$ form will do;

   (4) Avoid $e^{f(x)}$ form when $f(x)$ is complex, *e.g.*, use $\exp \left\{ -(x^2 + y^2)/a^2 \right\}$ instead of $e^{-\frac{x^2+y^2}{a^2}}$. 

   — 95 —
(5) Avoid the \( \frac{df(x)}{dx} \) or \( \frac{\partial^2 f(x)}{\partial x_1 \partial x_2} \) notation where \( f' \) or \( f_{12} \) will serve without ambiguity;

(6) Reduce the heights of expressions such as \( \int \), \( \sum \) and \( \prod \) by using, e.g., \( \int_{r=0}^{\infty} \) instead of \( \int_{r=0}^{\infty} \);

(7) Use abbreviations for complex expressions which appear frequently.

7. Statistical tables and diagrams should be neatly prepared with clear explanations, so that the reader can understand their meaning without hunting in the text for explanations.

8. Bibliographical references should be accurate, and follow the style and punctuations as in the following examples:

References

Citation of references in the text should be by the author(s) followed by parenthesized Arabic numerals denoting the year of publications, as Aitchison and Brown (1957), Arrow (1951, Theorem 1), Panzer and Willig (1977b, p. 488), etc.

9. Manuscripts which do not conform to these requirements may cause unnecessary delay in processing and have to be returned to the authors.
